About

I am passionate about building real things for real people.
My interests include software engineering, embedded system development, robotics, and Maker culture.

Skills

Python, Git, C, C++, Atmel, Linux, Java, Trello/Jira, MATLAB, VHDL, Assembly (NIOS, MIPS, ARM) + Web Dev.

Education

(2018 - 2021*) M.S. in Computer Science ~ Emphasis: HCI / HRI — GPA: 3.6 / 4.0
University of Wisconsin - Madison, Madison, WI

Coursework:

- Human Computer Interaction
  - + Wearables
  - + User Modeling
  - + Data Visualization
- Artificial Intelligence
  - + Machine Learning
  - + Computer Vision
- High Performance Computing
  - + Adv. Computer Architecture

- Human Robot Interaction -

(2014 - 2018) B.S. in Computer Engineering ~ Emphasis: Embedded Systems — GPA: 3.9 / 4.0
Milwaukee School of Engineering, Milwaukee, WI

Coursework:

- Embedded Systems
  - + Computer Architecture
  - + Digital / Analog Circuits
  - + Control Systems
  - + Digital Signal Processing
  - + Computer Networking
- Software Development
  - + Operating Systems
  - + Data Structures
  - + Computer Vision
  - + Neural Networks
  - + Computer Graphics
- Business / Management
  - + Servant Leadership
  - + Entrepreneurship
  - + Ethics for Mgmt. and Eng.

- Engineering Practices -

Experience

(2019 - 2021*) Graduate Research Assistant ~ People and Robots Lab, Computer Sciences
University of Wisconsin - Madison, Madison, WI

- Developed collaborative robot (cobot) authoring and training interfaces [Authr, Expert View Dashboard].
- Researched interactions with cobots for both attention management and levels of task interdependence.
- Worked with several colleagues outside of lab (in Human Factors and Optimization) to investigate cobot effectiveness when deployed on a variety of manual work activities.
  - Contributed robot capability analysis as inputs into allocation algorithm.
- Contributed to lab infrastructure and processes.
  Ex. Maintained centralized robot description and configuration repository for lab.
  Ex. Device bringup and documentation (Universal Robots UR3e, Microsoft Hololens 1 & 2).
- Assisted colleagues with their user studies, technical development, and paper writing.

(2016 - 2018) R&D Software Engineering Intern
Dedicated Computing, Waukesha, WI

- Responsible for development of embedded firmware in C/C++.
- Prototyped server hardware and software systems [Matrix Storage, Fan Controller, OLED].
- Integrated embedded devices into server control software with Python.
- Developed internal hardware testing infrastructure [Thermal Chamber] with NodeJS, Python, and MongoDB.
- Contributed to product life-cycle documentation for design, implementation, and testing.
- Participated within company makerspace, developing several Arduino projects.

Notable Projects

Authr ~ Cobot authoring environment.
- Developed an Angular web app with ROS backend.
- Custom domain language designed around Therbligs.

Expert View Dashboard ~ Cobot training environment.
- React web app with ROS backend and Unity simulation.
- Operationalizes expert thinking into a checklist novices use to develop their programs with custom domain language.
- Explored Microsoft Hololens as an alternate XR interface.

Matrix Storage ~ Server Backplane Controller.
- Developed controller firmware with Atmel C.
  - Aggregates PSU, fan, and environment sensing and control for Linux node on I2C system bus.
  - Developed virtual register interface.
- Interfaced firmware with python application.
- Worked in an agile team; participated in standups.
  - Mentored by electrical and software engineers.

Automated Thermal Chamber Testing.
- Developed several subsystems:
  - Unit-Under-Test state scraper captures CPU and GPU configuration / sensor values with NodeJS.
  - Thermal couple monitor running on NI cRIO.
  - Chamber control server with NodeJS issues low-level TCP byte commands.
- Integrated subsystems into internal testing software.
  - Stored data from subsystems into MongoDB database.
  - Extended Typescript test runner to control subsystems.

Programmable Fan Controller.
- USB UART with JSON API to configure programmable thermal profiles with individual fan control.
- Firmware written in C for Atmel ARM microcontroller.

OLED Node Display
- Wrote firmware for OLED display with USB UART and capacitive touch buttons used to visualize node ID.
